UNIVERSITÄT
KOBLENZ · LANDAU

- ❖ Towards open government in policy making
- ❖ The OCOPOMO project
- ❖ New initiative: eGovPoliNet – The Policy Community

- ❖ Today's global challenges are interconnected, dynamic and complex in nature
- ❖ Policies to address these challenges having strong impact on the well-being of societies and economies
- ❖ Dealing with complexity a key success factor for good governance in the 21st century
- ❖ Policy makers must be able to cope with unwanted side effects from environmental changes and dynamics
- ❖ Constituency / Citizenship no more just accepting what politicians decide

❖ Good governance principles

- refer to approaches and guidelines for good governance and public administration to promote interaction and formation of political will with regard to societal and technological changes

❖ Five principles for good governance set by the EC

- Openness
- Participation
- Accountability
- Effectiveness
- Coherence

http://eur-lex.europa.eu/LexUriServ/site/en/com/2001/com2001_0428en01.pdf

❖ Accountability

- it is possible to identify and hold public officials to account for their actions

❖ Transparency

- reliable, relevant and timely information about the activities of government is available to the public

❖ Openness

- governments listen to citizens and businesses and take their suggestions into account when designing and implementing public policies

Open Government: Fostering Dialogue with Civil Society. OECD Study, 2003

- ❖ Demand for integration of e-government, e-participation and e-governance
- ❖ OECD study states:
“open and inclusive policy making offers one way to improve policy performance and meet citizens rising expectations. Public engagement in the design and delivery of public policy and services can help governments better understand people’s needs, leverage a wider pool of information and resources, improve compliance, constrain costs and reduce the risk of conflict and delays downstream”

“Focus on Citizens: Public Engagement for Better Policy and Services”
OECD Studies on Public Engagement, OECD Publishing, 2009

- ❖ Enhances transparency and accountability, public participation and builds civic capacity
- ❖ Offers a way for governments to improve their policy performance
 - by working with citizens, civil society organisations, businesses and other stakeholders
 - to deliver concrete improvements in policy outcomes and quality of public services

“Focus on Citizens: Public Engagement for Better Policy and Services”
OECD Studies on Public Engagement, OECD Publishing, 2009

What is a “public policy”?

Some example ...

❖ The government stake

- Cannot alone deal with complex global and domestic challenges, such as climate change
- Face hard trade-offs, such as responding to rising demands for better quality of public services despite tight budgets
- Need to work with their citizens and other stakeholders to find solutions

❖ The citizen stake

- More educated, well-informed and less deferential citizens judge their governments on “democratic performance” and “policy performance”

**What current challenges in
collaborative policy development do
you see?**

- ❖ Towards open government in policy making
- ❖ The OCOPOMO project
- ❖ New initiative: eGovPoliNet – The Policy Community

Current Challenges in Policy Making

- ❖ Appropriate ICT support in policy planning not deployed widely
- ❖ Management of complexity in strategy and policy formation
- ❖ Development, visualisation and simulation of appropriate policy models usually done by experts
 - black-box approach
- ❖ Lack of open collaboration and therewith transparency in identifying the crucial features of complex social environments to inform policy models
- ❖ Online participation means not yet deployed widely in strategic decision making

Aims of the Project

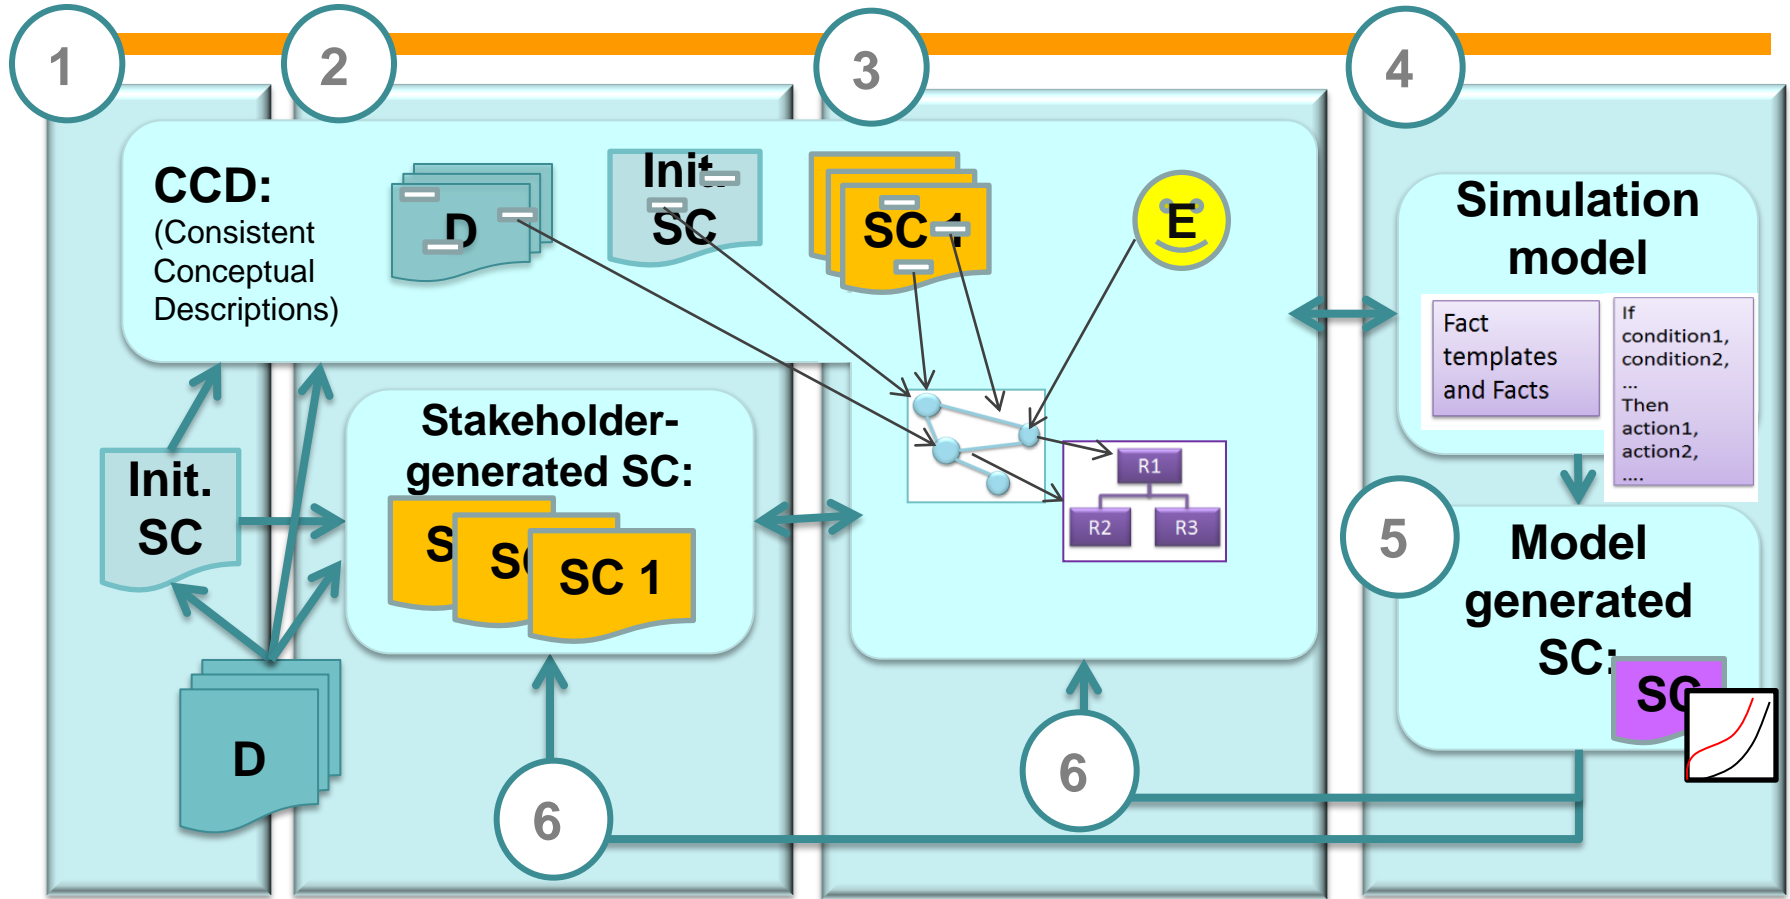

- ❖ Support key stakeholders to participate in the processes of policy formulation
 - Policy analysts, policy operators, wider stakeholder groups of specific policy domains
- ❖ Integrate methods and tools of scenario-based policy formation with formal policy modelling
- ❖ Develop an integrated ICT platform for efficient policy making
 - Mechanisms of open collaboration along the policy process
 - Supporting engagement of wide stakeholder groups

Integrating Scenario and Formal Model

- ❖ Goals, scope and social processes specified by participating stakeholders
- ❖ Stakeholder-generated scenarios inform model design
 - Key in model design is a set of if-then rules
 - Stakeholders see natural-language pseudo code
 - Enforces precision in use of language, expectations, goals
- ❖ Models produce simulations which are formal scenarios
- ❖ Participating stakeholders evaluate model generated scenarios
 - Surprises involve further investigation of model and scenarios
 - Iterations in developing formal policy models

Two Different Kinds of Scenarios

- ❖ Evidence-based stakeholder-generated scenarios
 - will inform simulation models to run alternative policy choices, i.e. to show potential real effects of alternative conditions and courses of action
- ❖ Model-generated scenarios
 - results of the simulation run will generate scenarios to help better understand potential interferences or conflicts of positions of stakeholders, which help them to reflect their positions

Complementarity of Scenario and Policy Models

❖ Chaining in OCOPOMO

- Scenarios built with goal in mind (backward chaining)
- Models built from behavioural and contextual evidence – using forward chaining rules

❖ Richness and precision

- Scenarios developed using rich, natural language
- Rulebases in models are precise, formal statements

❖ Exploitation and exploration

- Scenario exercises natural to encourage exploration – ideas generation
- Models facilitate exploitation and understanding of prevailing context

What Is Scenario Building ...

❖ Method for foresight according to Geschka (1978):

*“systematic,
participatory,
future intelligence gathering and
medium-to-long-term vision building process
aimed at present-day decisions and
mobilising joint actions”*

WHAT IS A SCENARIO?

Some example ...

❖ Scenarios

- Are textual description of a perceived view or understanding of a topic under discussion
- Cover existing world status or mental model of stakeholders
- ❖ Alternative scenarios to describe different aspects and /or alternatives
- ❖ Different stakeholder groups develop different sets of scenarios independently
- ❖ Scenarios may be conflicting among stakeholder groups
- ❖ Scenarios may be extended and therewith advance an existing scenario (nesting scenarios)

Scenario Extract of the Kosice Self-Governing Region

I am *living with* my wife and two children *in* a three room *flat* below the top of the *house*. The house, in which my flat is in, is not well insulated and, hence, has high consumption of energy for both electricity and heating. Since energy prices are increasing and the energy consumption in my *house* is very high, I am *reflecting alternatives* both to *decrease consumption* such as *renovation* and to *switch the source of energy* (if possible). Currently, I am *recognising* that *energy consumption* is too high and more and more becomes too expensive for me and my *family*. Hence, I want to *reduce costs of energy consumption*. For me who am *living in* a *flat*, the *association of flat owners is responsible for* energy issues, i.e. they have to *perform energy audits* by law. *Citizens need to provide certificates on* how efficient energy use is in the house (*energy certificates* and *energy audits*). I have to *discuss with* my *family* and *neighbours*. Together we *can consult* the *association of flat owners* for a plan to *trigger renovation*. The *association of flat owners*, then, *calculates the impact of the renovation*, the increased *energy price* and the reduced *energy consumption* for the future *maintenance costs*. *Urban householders are obliged to create* an association; *rural houses are not*. An *association hires service company/building manager* (on fee) who is *responsible for dealing with* *heat and electricity providers*. An *association may refuse to cooperate with* a *service company* and *make arrangements with* *heat provider* on its own. An *association* itself can *be member of* a higher association. An association of associations *is a board of directors*, which e.g. *talks with* *regional* or even *national governments*.

898 To work with London's boroughs to ensure the effective local delivery of our shared aims.

899
900
901
902 3.1 Delivering across London
903
904 Vision To develop, through the HCA, new partnerships and better approaches to providing homes in successful communities.
905 London now has a unique set of arrangements in place - with the Mayor responsible for housing strategy and investment, and the HCA
906 and its London board, chaired by the Mayor, responsible for housing delivery. These arrangements provide an opportunity for the
907 Mayor, the HCA and the boroughs to work much more closely and effectively than in the past to deliver the homes that London needs;
908 developing better relationships with the development industry as a whole, and creating new ways of working. But there is a need
to build on these devolved arrangements, to ensure that local communities have greater engagement in and support for how housing
is delivered in their local area.
London's housing market has been seriously affected by recent economic and financial conditions. The economic downturn has created
major challenges in maintaining delivery of London's housing supply pipeline.
But it is essential that delivery is maintained, as the downturn has not, in any way, reduced the need and demand for more homes
in the capital (see Section 1.1). In fact, many problems have been exacerbated. Providing an adequate supply of high-quality homes
is also vital to maintain London's international competitiveness, and the construction industry itself is a major source of
employment in the capital. In addition, a loss in capacity in the development sector will impede market recovery for London.

Conceptual Model for Policy Description in CCD and Formal Policy Model (Approximation)

Step 1 of Transformation: Identification of Aspects of Relationships

Phrase in scenario description	Aspect (issue)	Category	Characteristics of aspects	Model component
<i>... living ... in a three room flat ... house ... is not well insulated ... reflecting alternatives to decrease [energy] consumption ... and to switch the source of energy [to renewable and green]</i>	Energy consumption	State: Alternative or multivariate	If alternative: {"nuclear", "gas", "solar", "wind", "bio-mass", "hydro-thermic"} or if multivariate: <nuclear x_s per cent, gas x_f per cent, solar x_n per cent, wind x_w per cent, bio-mass x_b per cent, hydro-thermic x_h per cent>	Condition part of a rule in an agent's rulebase, fact
		Goal (description of desired future state)		Also a fact
	consume	State change (ways and means, measures to be taken)	Action description: <i>insulate house to reduce energy consumption</i> <i>switch to green energy provider</i>	Action part of a rule in an agent's rulebase, to be determined by analysing possible ways from current states to goals
	Household	Actor	Endowed with a rule base, a fact base and goals	Agent class

Step 2 of Transformation: Identification of Rules (Rule-dependency Graph)

Model structure	Model comp.	Name	Natural language description	Formal description (Code)
<i>Agent "Household"</i>	Structure	Household	Agent class	class household{...}
	Facts	Current state	Current consumption of energy per household	Class ConsumptionState { double InsulationClass; double soilCapacity; double priceOfSolarEnergy; double windCapacity; double priceOfWindEnergy; ...}
			Current state of house insulation	
			Current price for heating energy per energy type	
		Desired state	Desired insulation of house	PlanningGoal [objective insulation] [objective minimumCost] [objective greenEnergy] [priority high]
			Desired consumption of energy in households Maximum necessary import of gas from UA	
		Danger	House owner will not insulate house Government will not subsidise investment in soilPlants on house	Danger [cheese] [losses]

❖ Economic policy models

- Top-down and theory-driven
- Statistical usually; Verhagen is “evolutionary”

❖ Environmental policy models

- Many models – usually economic
- Significant proportions of papers about policy modelling in social contexts (Yearley, van Daalen et al.)
- Found no papers incorporating institutional evidence for a particular place, time or policy

❖ Evidence-driven – all agent-based and bottom-up

- Relate to specific institutions and policies

❖ Approach

- Scenarios generated by stakeholders
 - Using integrated ICT-based participation platform
- Model designs driven by information from scenarios
 - Stakeholder concerns and expectations
- Interactive, parallel development of models and scenarios

❖ Type of model

- Evidence-driven
- Agent-based

❖ Role of modelling

- Precision
- Exploitation
- Exploration

Three cases of public policy

- ❖ Renewable energy policy in Kosice Self-governing Region
- ❖ Knowledge transfer in tourism and cultural industries in Campania Region of Italy
- ❖ Housing policy in London

- ❖ OCOPOMO policy development process: integrated approach from narrative scenarios to formal policy models
 - Iterative process of identifying the parameters and features informing formal policy models
- ❖ Consistent conceptual description (CCD): Incorporating traceability in the iterative policy development process
- ❖ Open collaboration in policy development through integrated web 2.0 based e-participation toolbox
 - Enabling policy analysts, policy operators and wider stakeholder groups to work together collaboratively

Expected Impact

- ❖ Contribution to strategic policies and to implement open government
- ❖ Contribution to transform government and administration to an open, effective and efficient participative governance (good governance principles)
- ❖ Provide new opportunities for open discourse among stakeholders of the policy domain and the policy experts
 - in stakeholder-oriented scenario generation
 - in evaluation of formal policy models
- ❖ Improve transparency and traceability in strategic decision making by involving different stakeholders in the participative process via the open collaboration platform

Agenda

- ❖ Towards open government in policy making
- ❖ The OCOPOMO project
- ❖ New initiative: eGovPoliNet – The Policy Community

**ICT-2011.5.6 ICT solutions for Governance
and Policy Modelling
FP7-ICT-2011 Coordination Action (CA)
project
Grant agreement no.: 288136**

www.policy-community.eu

**eGovPoliNet: Building a global
multidisciplinary digital governance
and policy modelling research and
practice community**

Strategic backgrounds and status quo

- ❖ Significant societal transitions and drastic changes in economy, climate and demography currently affect societies and social behavior around the globe
- ❖ Longer-term transformation to be mastered and steered well ahead in time
- ❖ Several projects running
 - to respond to challenges and to bring forward solutions to
 - ❑ deploy innovative ICTs to support open governance
 - ❑ facilitate policy development through innovative ICT support
 - to foster disciplinary integration and multi-disciplinary problem solving

Need for Integration and Joint Efforts

- ❖ Overcoming traditional fragmentation of research efforts through consolidation, community building, integration
- ❖ Researchers and practitioners to exchange and learn from each other in specific themes
- ❖ Establish respective communities spanning across the globe to discuss advancements and future challenges

eGovPoliNet will foster co-operation and coordination of research and practice to address issues that could not be solved alone

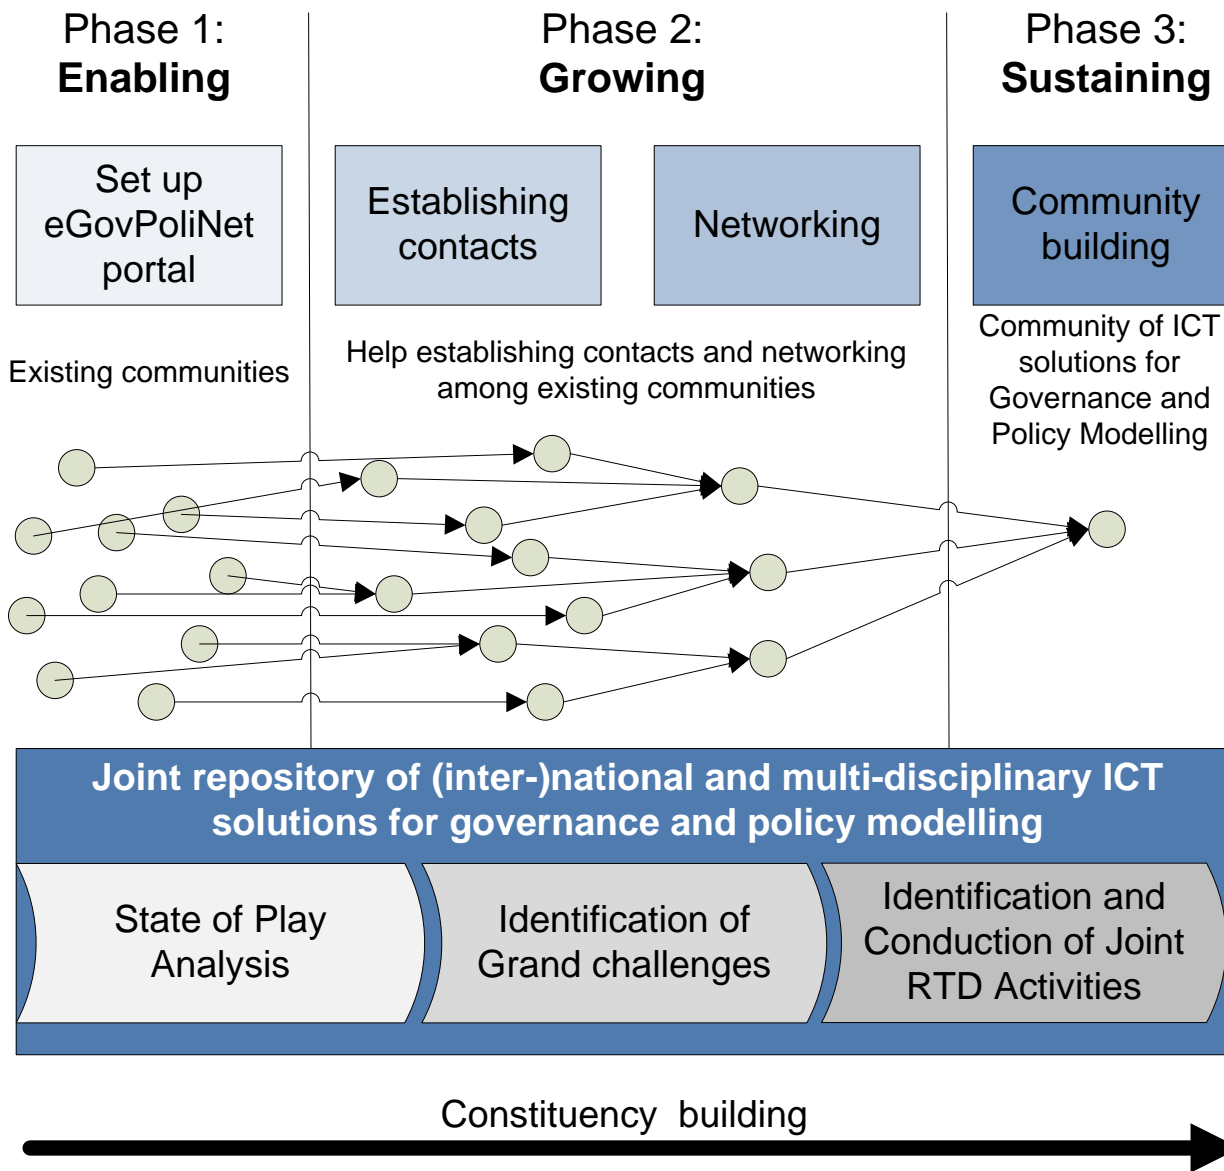

Overarching objective of eGovPoliNet

- ❖ Strengthen scientific, technological and social research and practice excellence in digital public governance and policy modelling by
 - integrating the research and practice capacities of individuals and organisations spread across Europe and worldwide
 - including lessons and innovative approaches of the existing projects and future projects

Concept of eGovPoliNet for an evolving international community building

Expected achievements

- ❖ Establishment of a network
 - Regular interaction via online and offline international and multi-disciplinary constituency building events
- ❖ Set-up and growing of community knowledge portal
- ❖ Studies and comparative analyses of cases and the field
 - Identifying research, practice and development projects
 - Identifying good-practice examples concerning modelling and simulating
 - Investigating and visualising social behaviour for better understanding

Join the Network

- ❖ Significant challenges for governance to face in future
- ❖ Joint efforts to achieve substantial contributions to advance the field and to improve economic growth and social welfare
- ❖ Governance and policy making demand
 - appropriate support through governance and policy models, process flows and analytical tools
 - appropriate tools ensuring reliability and validity
 - proper understanding, interpretation, visualisation and harnessing of collaborative online tools
