Overall project aims

❖ Provide an integrated ICT toolbox with proper mechanisms for open collaboration in policy modelling, including collaborative support in scenario based futures development

❖ Enable actors of all target groups at different levels of government across Europe "to master and shape future developments so that the demands of its society and economy are met"

❖ Demonstrate that, with appropriate ICT, the integration of

  ➢ formal policy modelling,

  ➢ scenario generation and

  ➢ open and widespread collaboration

is possible and facilitates policy formation at different levels

  ➢ local, regional, national or global
